(...) transformar a experiência educativa em puro treinamento humano é mesquinho o que há de fundamentalmente humano no exercício educativo: o seu caráter formador.

Paulo Freire

Para o professor **Alexandre Rojas Belli**, a educação que ele quer para o futuro perpassa a sala de aula. É uma educação integrada aos valores sociais e o respeito à democracia, pautada em um trabalho engajado dos docentes. Desta forma, o professor realizou com seus alunos um trabalho de construção textual que se materializou nos trabalhos que serão exibidos aqui. Estes trabalhos são a prova de que a visão do professor Belli pode ser alcançada, desde que os profissionais a queiram e, também tenham recursos e apoio para tal. Nas páginas a seguir os alunos do professor produziram textos utilizando o gênero textual dissertativo, para debater a questão tema. Suas reflexões e esperanças para nosso futuro são inspiradoras.

Patrick Ramon Gomes Oliveira

Supervisor Pedagógico Centro Interescolar de Línguas 2 de Brasília

# Matheus Carrilho Ramos

I, as a student, always wanted a place with discipline and organization to study - a place without teachers and students who position themselves politically.

I would like a school where simple Math was taught as in any other first world country, where History wasn't altered and its facts were exposed indeed as they happened.

As a student, what makes me more frustrated is the lack of teachers in the public education network. Many struggle trying to change the future, but they forget that to change it you have to teach the young ones, because they're the ones who will live this future.

Besides these factors, there's also the lack of investments in sports, because like any other child or teenager, students like to spend their energy with soccer, volleyball, fights and several other activities. And these can make them more interested in classes or, at least, do not abandon school.

Now, as an undergraduate student, I see how my education and teaching could have been better. As the lack of just one class could have affected my future or facilitated future issues.

I hope one day everyone will have the awareness that education is the key and the weapon to change the future, because without knowledge there's no solution.

# Fabiana Barros Leite

Education is crucial for training wise professionals, better citizens and to meet the internationally recognized standards. Nowadays, it must be constantly evolving. Education is not just about school; we have to open these dimensions for society to educate ourselves through social activities, music and so on.

We are all in some way responsible for the success or failure of individual and/or collective education. School education needs more and more attention, not only from the family, but from the government too. We need more investments; after all, this is what shapes us intellectually.

Family education is also paramount to raise law-abiding and educated citizens. This way, they are going to be less corrupt and evil in this society. Social education is important for us to learn how to live socially, with respect to each other.

# Raíssa Ranielle Ibiapina Costa

A true education should not just be about how much you know about something; about theme X or Y. Currently - in all schools - it is very much charged to have knowledge shown in a test to reach a grade (A) for the next school year. Of course it is really important that students reach a minimum grade for next year, but what I mean is that a good education should not just be connected to it.

A good education would be one that prepares us for the challenges of adulthood. A true education should not count on theoretical parts only – in which our ‘face’ value would depend on our scores at the end of a two-month period. Today’s education needs to teach us questions about moral and interpretation too.

The education in schools should help us cultivate and blossom on what is the best already inside of us and teach us about how we can use this to do good to people who haven’t had the same opportunities.

A good study environment should be comfortable and motivating, because it’s in classroom that we must express our creativity and share our

gifts. Harmony, respect and empathy are some characteristics that are also important to be present among all; so that the feeling of one student being better treated than another one (sometimes to a point of getting humiliated in front of a class) – just because of his or her ‘title’ or ‘place’ in society – won’t exist at all.

In a structure for a good school environment, a place where the student feels good is key. Wall and floors in a good condition, well-conserved gardens and especially having classrooms (windows) facing the inner part of the school – without making students being exposed to the public areas or to the parking lot - are important too. In my school, for example, the position of classrooms gives us the sense of non-security, which is bad, because safety in schools has to be effective and makes us (students) feel safe.

Electronic devices that help us in classroom are very important – like 3D videos on the human body when studying Biology – because they would help us better understand the content. Air conditioners and fans that work well are also important at any school.

Good food and effective management of school employees – that should work together to ensure a better and quieter school life for students – would be very much desired too.

# Kawan Lopes Fernandes

In this text I want to show how I want schools to be in the future. Schools did not accompany the evolution of technology. Schools didn't follow the evolution of technology. If I ask my parents what the classroom was like when they were my age, I realize that nothing has changed technologically in a few years time.

I want a school that has a better quality each day, that politicians invest more money in education through technology: students should already be using tablets, computers, robots, with teachers enabled to teach using these tools, etc... Because I believe with technology students could learn more easily.

Then I want to introduce this system in public and private schools – so that it will improve teaching.

# Ana Júlia Fernandes de Oliveira Travassos

The world is big

The warrior population

The ones that fight for their rights

And with poor education

Little explanation

For too much content

Few teachers for too many students

Little money for much

Money!

Little care for much sloppiness

Little technology for too much knowledge

The education I want for the future

It's an education that respects students' rights

With a school that doesn't just teach

But that sparks interest, the love for studies

Teachers teaching with more love and not only for money

With educated students who maintain the school

A school with free and healthy meals

With money to meet its needs

Not a school with money diverted by government

Corruption!

This is what I and the other citizens want

A school that qualifies a student for his or her performance and effort

And not just for grade '10'

Having a good education isn't an obligation

It's an incredible source of knowledge for everyone in all aspects

Let's fight peacefully for a better education we all want and deserve!

# Amanda Rodrigues Lopes

Our education today is far from being one of the best, and for the future I, as a student, would like this to be changed.

A school where the student feels embraced is essential for learning. Throwing young kids and teens in a crowded and unaccompanied room, makes teaching get delayed.

Technology in classrooms and laboratories - for research and experiments – not only help the students feel more interested in classes but also generate more will to learn.

We want an equal education where the public education schools are as valued as those of private education. The education I want is for teachers to make us closer to reality, for them to help us see the world with real eyes, so that we feel ready and able to enter a university as soon as we leave school.

We all have to strive to give greater and better opportunities for everybody. And I believe that this is achieved through access to quality education for the population in general. We have to debate which education we need and want for now and for the future.

# Matheus Kauã Nascimento Lins

School is important because it makes people ready for life. Not for the “ENEM” or the “vestibular” only, but it also makes humans fit into society.

In my opinion, school is important. I like to study and learn, but what makes me sometimes “dislike” my school is its environment. Actually, there is always a lot of tension among students.

I would change that, apart from calling out some students who don’t want to study and upset those who really care for it. If that changes, school would become funny, rather than an obligation. Schools could accept the use of cellphones and computers too. They also should stop using outdated forms and paper copies. It’s easier to learn when you want to learn.

If only the school changes, it would change almost nothing at all. However, changing the students would then be a complete evolution to a different type of school. Students should be made aware of how good having education really is.

# Leticia Souza Pereira

Before thinking about I.Q., let's pay more attention to E.Q.? Yes!  
Emotional Intelligence (Quotient)!

It begins in gestation, in childbirth and early childhood, in times we are going to face new situations that we still do not know how to deal with. So, before screaming that the kid doesn't know anything, we can try to understand and help him/her solve his/her difficulties. It's not the case to hand over the tray to the world, but it certainly isn't the case to cast it to Mars either.

Respect. Freedom. Limits. Respect to talk and explain. Freedom to let us dream and help accomplish our aims. Limits to teach and respect. It's a cyclical system.

A working gear coming from home to school makes room for us to say 'what education we want for the future'. Education for life! Besides 'Baskaras' and syntaxes. Let's learn to live with our mistakes. Let's learn History going to museums; Mathematics repairing the soccer field; Portuguese writing a 'cordel' (poem structure similar to a sonnet); Chemistry doing more

experiments. Between one break to another, a meditation to balance, a wheel of conversation about everyday life and, before grade 10 becoming essential, a “Is everything alright?” and psychological health are paramount.

Plant tomatoes for the school snack; visit nursing homes and grow empathy; teach about financial control, sexual education, and conscious consumerism, how to treat neighbors or maybe how to reduce litter. Make us curious about the world and that will make us create our own arguments!

Books and imagination let the world be ours, be new, belong to the people.

# Yuri Natanael Juvenal Ribeiro Vieira

The education I want for the future is an education where people practice a good ethical conduct, where everyone can respect themselves and this way such behavior would reflect within the school environment, making it more enjoyable for students and teachers.

In order for us to achieve that much desired ‘good education’ we must bear in mind that it should not be shaped only in academic knowledge, but also in social relationships where students have respect for each other and for teachers as well.

Many students fail to show their full potential because of the repression they suffer most often from their classmates themselves. Such behaviors result in students feeling inferior and they begin to feel uncomfortable in the social environment – this has a huge havoc in the academic and social life of the students, who grow up developing several problems with social relations and this often leads them to make wrong decisions in life. Sometimes they become involved with things that do not do any good for them and start to live a bitter life where they do not contribute to anything in society – on the contrary – they generate more problems.

In terms of improvement in academic education we could aim at a different method of teaching, taking advantage of more dynamic classes, also making use of technologies that would be of great help for teachers to teach their classes.

Brazil has a somewhat controversial educational system where we have evaluations with a certain degree of difficulty, such as PAS and ENEM, but the education that students receive is not equivalent to the difficulty found on these evaluations.

Another important point is the modifications in secondary education, which for many may seem to have facilitated the lives of students and teachers, but it's not true - because it becomes harder for students to remember some contents in the end of the academic year – since we have lost annual contact with most of the school subjects.

# Renan Douglas Almeida Valença

Public education in Brazil is a reflection of an unstable political situation that the country is undergoing. Direction and coordination of public schools strive for – at least – provide basic education.

The first essential thing to obtain a quality education would be to offer components such as computers, a good quality internet service for researches and school supplies (to make classes more dynamic and not a tedious and uncomfortable environment).

Teachers deal with dozens, sometimes hundreds of students on a single day. Because of this, it would be essential that they increasingly acquire instructions to better manage people and, consequently, reflect on giving more productive classes.

To ensure a quality public education, it would be necessary teachers who deal well with their students and run more dynamic classes, together with a good provision of school material and technology to assist them in classroom.

# Hellen Kathleen Araújo Alvares

In Brazil, education has been showing some slips in recent years. High school has shown a very low rate of learning. According to data from the IDEB (Basic Education Development Index), only 50% of students complete the last three years of school – so the government has proposed changing education (so that it can improve results).

The BNCC (Common National Curriculum Basis) is responsible for this High school's transformation. It states, at the moment, the Mathematics and Portuguese will be compulsory subjects during all years of High school. Each student may choose other subjects as areas of knowledge. Professional courses will also be offered, in case the student prefers to do so. And when you finish, you will receive a certificate, which can help you enter the job market.

In addition, the BNCC also states that the workload will also be increased. The current class hours are 800 per year, and with this High school's change, it will be added another class each day, resulting in 1000 hours per academic year then. However, this can be a negative aspect of this transformation process, because it isn't the amount of study hours that will make one achieve better outcomes. Instead, students may become more tired

and disinterested in class. And this can generate a disharmony between students and teachers.

Another point is how the ENEM evaluation will look. No change has been defined, but it is possible that there is some, because if each student chooses an area of knowledge, the INEP, MEC and BNCC will need, together, to devise some form of proper evaluation for all students.

Therefore, for our country to achieve a good result in education through this High school remodeling, it is necessary that this government has flexibility and analyzes better the probabilities of this transformation, because what is presently defined can also have many negative results. Thus, Brazil may not achieve the desired index results any time soon.

## Calebe Cardoso de Aragão

I hope that in the future schools will offer more infrastructure, where adolescents and young people can enjoy better learning and have a more complex and dynamic teaching.

Higher education is not only for professionals, but for students! We all hope that a failed education system will end and that the creation of a new one will come as quickly as possible, in order to train people capable of executing the good work they have chosen.

Education needs support to reach the remotest places of some countries, and support to address the situation of out-of-school children. In the Brazilian public schools there is still a great deficiency regarding the infrastructure issue, for these situations we urgently need changes, especially in the regions of Acre, Amazonas, Pará and Roraima. The school of the future cannot ignore the technological advances that have occurred in the past years. We need more technology, as a support for students, in order to improve their knowledge and to accelerate the learning process, but the use of this type of tool still needs many adaptations in schools too.

## Stefanny Siqueira Gonçalves

Nowadays, the theme 'Education' is much approached, but the truth is that Brazilian Schools repeat the nineteenth century model, an industrial model with queued portfolios and chalkboards – searching to develop people for the twenty-first century!

We do have heard superficial criticism constantly, which frequently is no consistent with the experience and opinion of any educator on public education, as their challenges and difficulties are completely different.

But the truth is that we have many public schools with low structure and many of these schools have constant security problems too. Generally, it is quite the opposite in private schools – they have a more efficient management concerning both the students' learning process and the school's development itself.

Education needs more focus in improving its basics – one cannot forget that the nation's development begins with reading and writing, and the developments of basic values.

One of the possible solutions to solve these problems is to close down for good all private schools, making it equal teaching and possibilities for everyone. Another solution is to make teaching more dynamic, so students would leave this age of the 'Industrial model school' and learn faster and better with new technologies help. In my opinion, no matter which solution is put in practice, safety in public schools must be improved too.

## Elisabela Sapalacio Ferreira

Education is a right of all children and young people, since it could promote a better future. Well, I like my school, but some points could get better – but generally it's good.

For a good school performance, a nice school's structure is important – with good rooms, bathrooms, a canteen, a library and a laboratory, among other spaces. A nice laboratory and a library with great books are essential and in my school they are missing.

A good administration also makes the school get better, with committed people to reach the best, dedicated teachers and students. The sentence “Students make their own school” is totally true, because the school doesn't only depend on itself, but of a union with students.

At school, there is a large incentive to develop projects, for example the “Ice pop for all” project, which used to test honesty, by starting from the sale of popsicles without an attendant – you put the money in a ballot box and catch a popsicle yourself. It would be a good dynamics to help understand the school content and projects with didactic value would be welcome.

The use of computers and virtual books would facilitate the study. The computers aid on researches and works and virtual books reduce the weight in the backpack. Another way to reduce this weight would be having closets at school - available for all students.

The students' interaction with games can turn the way of studying more entertaining – with educational games that could be even developed by students themselves!

There are many points to eulogize; however it can always get better. For instance, education in Brazil walks disqualified and it needs changes. Students are without opportunities and they are submitted to great efforts to reach their objectives. We are the future generation. It's necessary to qualify us to have changes; it's necessary a government that looks for a better future; it's necessary empathy.

# Wolney Johanyherison Bonfim Malheiros

Broadly, we can define education as the fundamental means for the habits, customs, behaviors and values of a society to be transferred from generation to generation, according to the evolution of the collective as a whole. Quality education is built from the ground up: school is a crucial place for training professionals and better citizens. To meet the needs of today's technological society, learning methods must be constantly evolving.

Some components are critical to learning success: creating challenges, activities, games that really bring the skills needed for each step, requesting incomplete information, offering stimulating rewards, combining personal talents with meaningful group participation, adopting platforms that recognize each student and, at the same time, learn through interaction, all using the right technologies. The articulator of the individual and group stages is the teacher, with his or her ability to monitor, mediate, analyze the processes and results, gaps and needs, from the activities carried out by his or her students (individually or in groups).

The arrival of mobile technologies in the classroom brings new possibilities and great challenges. They are increasingly easy to use; allow collaboration between close and distant people, integrating students and teachers from different countries, languages and cultures. And everyone, in addition to formal learning, has the opportunity to encourage each other to learn and develop by their own. Teaching and learning can be done much more easily, actively and focused on each person's pace.

Therefore, the difficulty in Brazil is to increase the number of good quality public and private schools. The current amount of institutions with good teachers and a nice infrastructure – that can motivate students and really promote meaningful, complex and extensive learning – is still below the minimum needed.

## Ana Carolina

Humanization, that's the key-word for me. We live in an educational system that insists on the homogeneity of the human being, and we are not the same, we don't learn in the exact same way, we are different of each other, unique. We have to explore the individuality of each being, and I am not talking about give each student they own private teacher, I am talking about a constant observation of the teacher in their students and a training to support and guide them. This may sound utopian based on the political state of Brazil, where our public schools are falling to pieces and the money that should be used to pay teachers and repair school are going to someone's else pocket. However, even if the present does not look very bright we must always strive for a better future, and for a better future, we need a better educational system.

First, we must realize that the education that you have here, in Brasilia, is completely different of the education that you have in the countryside of Amozanas, for example. Our public education is damaged, but in places that the resources are minimal damaged becomes broken and the kids graduate from primary school have learned just the basics. A teacher here in Brasilia

have a different paycheck then a teacher in the countryside of Amazonas, I will let you find out which state pays the most. Tip: The name starts with a B.

You're welcome. We have to create a parameter of our public education, how a teenager of the countryside can compete with a teenager of a capital? They will have to compete with each other when the time comes, it's unfair, it's unethical and it's just another way to keep the poor out of public universities.

There is no meritocracy in a system that don't give each person equal opportunity. Along with the creation of a parameter of the public education, we must create a parameter of the teacher salary, in all parts of Brazil teachers should all have the same paycheck, based on their contribution for humanity.

Perante a proposta e o desafio de saberem o que estudantes anseiam para a educação do futuro, as professoras Barbara Cristina Duqueviz e Cláudia Mendes Cunha convidaram seus alunos e suas alunas de cinco turmas de Inglês como Língua Estrangeira a explanarem e discutirem em inglês o tema “What kind of education do I want for the future?”. Para tanto, decidiram que as vozes dos que vivenciam como alunos a educação no cotidiano não poderiam ficar restritas às suas salas de aula. Assim, os textos dos estudantes e, conseqüentemente, suas vozes foram escritas no blog [www.studentswonders.blogspot.com](http://www.studentswonders.blogspot.com). A escolha por uma ferramenta virtual para a veiculação dos textos dos e das estudantes se dá por duas razões em especial: a primeira é a certeza de que o que esses meninos e essas meninas têm a dizer é relevante e precisa encontrar um canal fácil e abrangente que possa alcançar mais leitores para seus textos e mais ouvintes para suas vozes; a segunda é trazer para a escola ferramentas que são amplamente utilizadas fora da sala de aula e que, às vezes, encontram alguma resistência para serem adotadas na e pela comunidade escolar.

Os textos produzidos em meio digital para este projeto foram reunidos nesta coletânea. Procuramos mantê-los o mais original possível para preservar a autoria de nossos estudantes de modo que correções foram feitas apenas

quando erros comprometiam a compreensão. Desse modo, encontramos aqui anseios, pensamentos e previsões para a educação do futuro que transpuseram os muros da escola virtualmente e agora podem ser lidos em papel, esse meio consagrado de veiculação de informação e conhecimento.

Patrick Ramon Gomes Oliveira

Supervisor Pedagógico do Centro Interescolar de Língua 2 de Brasília

[June 7, 2018 at 8:03 PM](#)

The kind of education I want for the future is classified according to a person's potential and age. The children will have very little homework and spend more time with their family. The quality of education will not depend on their parent's income. Equal opportunities from the beginning of their lives could help people to start their adult lives in equal conditions to other people. The students will cover the material with study tools adapted to capabilities of students. In the classroom, students will be taught group work, problem-solving and group reflection. These means they have to learn how to apply their skill in different situations-learning platforms will give students an opportunity to learn how to negotiate, issues and exchange ideas on line. Besides that, teachers will be not only to pass the knowledge but also to identify student's values and interests. At least, the new education system must teach the students the ability to learn, not the ability to memorize. (Simone Tusi Ribeiro)

[June 7, 2018 at 9:17 PM](#)

The kind of education I want for the future is based on the application of field studies so that the exercises can leave theory in the classroom and learn more in practice. Like as in college, where the student attends what attracts him most and what the student has easily, the school could be a place where the student enjoys the pleasure of learning, a place that is more than the classroom, the students have a great deal of difference between them, and one of them is the ease of learning and how to learn, and so the school should adopt a method where it welcomes all students, especially those who find it

more difficult to learn only in theory, in the classroom, with more than 30 students, only with the teacher talking and talking. However, even with any change in the teaching methodology of schools, the student must have at home the habit of studying, why education begins at home with the parents, and with the family is paramount for the student's encouragement, since it is at home with parents that the student learns the basics of education, respect and various other values. (Rebecca Aires)

[June 8, 2018 at 5:10 PM](#)

The kind of education I want for the future and the one where the teacher does not just stay in the textbooks, because this is very annoying and the student has almost no interest in learning. A class where teachers have more technological resources to make classes more fun. Most teachers interested in teaching the student, have less content repeated, where you always hear the same content, and more material preparatory to the job market, an education in which you have ethics both in class and outside it because this is very important. (Vitória Tavares)

[June 10, 2018 at 11:45 AM](#)

A kind of education that I want for the future is that has more students whiling to learn and develop more each day, because the teacher is the basis of all achievements and is the teacher who Teaches us to live in society as true champions. Unfortunately, the education of Brazil is not so valued and it is not as rigid as United States' education. There, they do not have much

holidays, the students respect the teacher, and the school has every kind of resources. Different from Brazil, some of the schools do not have too many resources; most of the students do not respect the teachers and do not want to learn for being someone in life. For me, respecting teacher's job and developing my capacity is the best thing to do, because the study can show who I can be and me the good way. This is the reason why I have to keep fighting for what I want to fulfill my dreams and I can demonstrate my love and affection for all the teachers. (Luma Alessandra )

June 10, 2018 at 12:42 PM

The kind of education I want for the future is an education in which I do not need only one teacher to clear my doubts, but many of them, and with the internet and your resources, which is possible, thus extracting as much knowledge as possible. An education with many practice and applications, because it is easier to understand when you are practicing. I want an education that not pass only the traditional knowledge, but also pass things that can be useful in our lives like, for example, one thing that is already passed and can serve for other areas is how to do the calculation of how much of energy you spend in your house, because besides helping to save money, makes the student aware yourself about the correct use of water. That is the kind of education I want. (Eduardo Jóse)

June 10, 2018 at 2:10 PM

The kind of education I want for the future: Schools harmonized with all, technology is present in the classroom and everyone can enjoy it without distinction of any need. With this, people with a disability or some individual with learning difficulties can have a facilitation in their life. Education is a foundation for the society of the future. Without it, we will not be able to overcome the problems we have caused over the centuries. In this, technology will play a fundamental role in this process, in order to promote actions that contribute to the solution of these issues. Therefore, the school of the future is that centered in the pedagogy of the problem, that works with real questions and that technology is used as an element in the pedagogical process. It is also a pedagogy of the question, which seeks to give voice to the student and encourage him to question himself. Thus, technology can be part of all disciplines, from chemistry to Portuguese language, as a mediator of learning. The student needs to know what he is going to communicate and why he is communicating, and this is learned by making use of the Portuguese language as a cultural practice, which means valuing areas such as arts, philosophy and sociology. Brazilian education is very focused on content, not on methodological strategies, which hinders structural changes along these lines. It is a model of banking education, already criticized by Paulo Freire for decades. Technology, by allowing the sharing of information, makes the school no longer the place that "holds" knowledge. This can now be achieved quickly through a variety of technologies that have been used in schools to share information between students and teachers, such as distance learning

and computer simulations. We are going to evolve a lot in this field and, yes, we need to go beyond digital books." (Vinicius Venâncio)

June 10, 2018 at 2:56 PM

The kind of education that I want for the future is one where the government and schools makes projects to help who can't afford to go to school, like the people who don't have where to live, giving them a chance to improve their lives and ensure a good learning. In addition, a future where the students receive support from their parents and teachers so they can have a good schools performance and a good perspective of life. Another way to improve the education is the expansion of public transportation programs, ensuring comfort and safety for people who live far away from their schools or jobs and contributing foot the punctuality of them. (Hellen de Sousa Carvalho)

June 10, 2018 at 6:32 PM

It is well known in the legal community that education is a human right, fundamental and unavailable. That is the duty of the State and the family. It therefore seems obvious that people with disabilities also have the right to education, but the statistics insist on demonstrating that in practice this right is far from being guaranteed. My purpose here is to demonstrate not only that people with disabilities have the same right, but also they have the right to exercise it without discrimination, that is, to be received and taught in the same space (class), as all other students. If they require specialized educational

services, they may be offered separately as a supplement, but never in order to prevent such students from having access to the common classroom. We know that no one consciously denies people with disabilities the right to education, however, given the practical difficulties they face, they often admit that this right would be provided if they were educated separately only in specialized settings. Sometimes they justify that it is for "their own good". Perhaps the arguments of "practical difficulties" in relation to people with disabilities, give way to the awareness that they also have this right unavailable, without differentiations that lead to exclusions in relation to people without disabilities.

We are also aware of the fact that it is stated: "As regards students with disabilities, this is different because they do not learn in the same way and we are talking about education; in addition, they need specific attention and perhaps they should not be obliged to attend school ". Now, the justification for not receiving women and others, minorities was not much different. It is enough that the school is transformed to accept the differences that even this question is overcome. The school that organizes itself to receive only students that reach a certain level of intellectual development is a school that excludes even people without any type of disability or special educational necessity (few who finish the course in the same school); is a school that creates hateful situations of competition between students of the same class; is a school that privileges so much the transmission of knowledge, that it forgets the human development and ends up undermining the personal and professional future of that individual. There are examples of schools that receive people with and without disabilities, in the same classroom or educational space, and who are

successful, both from a personal point of view and from the transmission of knowledge. ( Bruna Eduarda Rodrigues )

June 10, 2018 at 7:44 PM

What kind of education do I want for the future is an education that will be intuitive and funny, not only in class where the students receive and revive knowledge and do not put in practice? An education needs this interaction. Another point that I want is that schools in Brazil are egalitarian and with a quality education, especially in high school because if we are thinking about the issue of public and private schools that unfortunately has a difference in quality of teaching, it is not a question of the quality of teachers because both are good but in the way that education in public schools are taken with negligence. For me, the education could be better with the technology helping the students and doing the class interesting and funny , for example with interactive whiteboard , tablets etc.(Pedro Gnone-)

June 11, 2018 at 8:59 AM

The education I want for the future is an education where the government invests in school and in a good structure in the system, how to use technology in its favor, focusing mainly on people who can't go to school, the students had a psychological follow up, because mental health is very important, many students go into depression because they are not self-sufficient, issues such as bullying, etc. Focus on professionals who listen to the student, and always help him to improve as a person; it is important that the student and teacher

have a good relationship. Cultural and sporting projects, excursions, practical classes in the open air, reinforcement, as well as practical, oral tests and evaluating the student for his effort, not only for a grade, and that both public and private students have the same opportunities. I also find it necessary for adults who did not have the opportunity to study or complete their studies to enter school. (Clarice Sousa)

June 11, 2018 at 3:45 PM

The kind of education that I want is a free and quality education that includes all the people in all places of the world. That the student's capacity isn't measured through notes and tests because many students are nervous in tests and finish without going out so well how much really they know thus the evaluation method wouldn't have to be standard, each one demonstrates its intelligence in a way. To standardize the knowledge is a form to increase bullying so that when It is a child a speech as “ You are donkey, didn't take a high note in the proof”, this sentence can be Said without many cruelty, but the child that hears this doesn't forget and remain with the trauma until up one Day she manages to accepted and to understand that she isn't incapable or unprovided of Intelligence, she simply doesn't has cold blood sufficient thing to stand the method of evaluation of the Brazilian education system.( Paula Lucio de Lima Santos)

June 11, 2018 at 3:54 PM

The education I want for the future is an education where students can be just students. Where they can have a good school, with a great investment in their education; where they can learn and find out their skills and not just try to fit in something that they are not good at; an education that is equal for private schools and public schools, where all the students can have the same opportunities. An education that can really change the world.  
(Gesllanny Thalliya )

June 11, 2018 at 5:18 PM

The education that I want an education that looks at what we want for the future. That we could choose from small what we want to do, that gives more freedom. That the government of this money so that the schools have environments so that the teachers take classes more productive. An education that the students can choose what subjects they want to do, but this choices came since child. (Eduardo Teixeira )

June 11, 2018 at 5:37 PM

The kind of education I want for the future is education based on evolution. Where students can easily contact teachers using technology such as mobile

phones, tablets and computers. Because having contact with the teacher behind the screen makes people more comfortable, asking questions and not feeling embarrassed. In addition, using the internet to study and practice to make the class more dynamic. (Henrique Guimarães Lopes de Aquino-)

June 11, 2018 at 5:40 PM

The education I want is one in which everyone can have the same teaching, all without exception, that somehow humanity realize that if everyone get an education better and equal, the world get better, more wonderful that already is, because besides people get more civilized and smart, certain that all start thinking about the situation of the planet, and find a solution to save it, this seems impossible, but I have faith in the future of humanity. (Vitor Gabriel Gonçalves Dias -3C)

June 11, 2018 at 7:50 PM

The education I want for the future is an education that is enough to prepare us for entrance exams, competitions, etc. in all aspects (discipline, motivation, etc.). I think it is also important that education be rigorous in showing care for the environment so that the investment requested in the next topic is well used, that it would be an education that the government invests in the infrastructure of the schools. (Maria Eduarda Caitano de Alencar -3B)

June 12, 2018 at 5:35 AM

The education I want is an education in which the teachers are professionally recognized. A good education requires good professionals, and for this to happen teachers and school, professionals need to be valued for their arduous efforts to teach. The role of the teacher is very important as a transmitter of knowledge and values, and because it is a profession that is currently undervalued, especially in Brazil, great professionals stop teaching for lack of recognition of their work and the difficulties encountered chasing a low-paid career. Therefore, I believe that the first step towards a better education in the future is to show teachers that we recognize their daily efforts and those they deserve more respect for such an important job to building a better country. (Isabela Silva de Castro )

June 12, 2018 at 10:48 AM

the education that I want for the future is an education where all have access to the same type of education, with that all would learn the same thing and would have the same opportunities of jobs, I want education in Brazil to be taken more seriously, more resources for students to have better learning and new ways of teaching. (Pedro Henrique Zeidan da Silva)

June 12, 2018 at 11:44 AM

I want technology to introduce in future education, because this generation is composed of more demanding students with activists done in the classroom. However, for this to happen it is necessary that education be valued first by the government. I want education in the future to be more demanding, and not to train students only to take tests but to lead in life (Carla Lisboa )

June 12, 2018 at 1:29 PM

I want an education where learn is more important than grades. An education that can recognize the individual abilities of the students and help them to improve it, some artists have difficulty in math, some engineers do not have English as priority and that is okay. An efficient education cannot focus just on good grades, but build good people, let kids and teenagers know they have talents instead just demand A+ in all school subjects. (Rafaela Lopes Palmeiro de Souza)

June 12, 2018 at 1:58 PM

The education that I want for the future, it is a new education. A new education with structure which help all students equally, where the school place gives a support materially and psychologically, offering a good

relationship between who compose the school, like teachers, students and workers. It is important control the respect and reinforce it. Schools need to be prepare to receive different cultures and explore them, to build a place where the free expression is respected. We need more integration between teachers and students for the classes not be only a reproduction of contents, we need in our education more practice, we need to see the theories in action. It is important to measure the kind of communication in a school place where people build your autonomy with studies and need to stimulate the knowledges. It's cool when the objects around us, meanly in the school, has a force that encourage, that stimulate, that create curiosities about the study objects, about the culture, about the language. The educators base the education that I want in respect, equal opportunities, in a good support for students, and in a good professionalism. (Israel Benjamim Siqueira de Lacerda)

June 12, 2018 at 3:00 PM

The education that I want to Brazil is an education where have respect between the teachers and the students, where haven't equality between the people, where the students like to study and have wishes to be someone important in life and make the difference, that is, an education where the inequality and the disinterest not exist. Many countries around the world have a good education, between them, stand out Cuba where the literacy rate is 0%, this is the education that I want to Brazil that have the literacy rate in 7, 2%.A good way to make the Brazilian education better is invest in schools and courses for turn up the learning and apply improvements in the technology for

more student interest and for the evolution of learning. Thank you! (Ezequias Lira )

June 13, 2018 at 1:26 PM

The kind of education I want for the future involves a larger relationship between student and teacher. I mean, the majority of people who were my lectures used to be strangers and the ones who I appreciate less. At the same, time the best teachers that I had used to be friendly and funny. Anyway, if we make the school a place where students want to go we will have more and better teachers in the future. Because school should not be just the place where we pass time and learn, but where we evolve and grow, as individual and citizen. (Mauricio S. Sousa)

June 13, 2018 at 2:17 PM

The kind of education I would like for the future is an education based on equality in terms of quality forever y one, no matter your race, your financial condition, your sexuality or anything else. Most students from private schools have a better education than students from public schools. The private schools (not all of them) offer better conditions in the way of teaching, infrastructure and many aspects; they are also more prepared for the entrance exams of the universities.

In other perspective, education's meaning should be rethought. Nowadays most people can see education partially or only to grow in capitalism by

conquering a well-paid job, or just to follow a tradition from family. I want education to be seen as an object to form our citizenship and connect nations around the world. (Gustavo Araújo de Sousa)

June 13, 2018 at 2:29 PM

The kind of education that I want for the future is that where the teachers receive more respect, more recognition for their hard work and dedication, where children are encouraged to observe their strong points and tastes, and explore these points to guide them to their possible carrier in the future. In addition, where a liberating education help the students develop their critical sense and own thinking. (Leticia Novaes )

June 13, 2018 at 2:38 PM

The kind of education that I want for the future is an education with a good base, because it is through an education base that we build a great learning structure. An egalitarian education in which everyone has the same base curriculum and school infrastructure, and excellent teachers. An education in which students care and if interested, after all they are the nation. That everyone can have access to education. Parents who believe that their children are the future and they need to be educated in the best way. An education that encourages believes and transforms students and teachers. An education in which there is respect between teachers and student, and responsibility with the educational obligations. The education that I want for the future, I hope that start from now, that we have the opportunity to learn in the best possible

way. As the educator, Paulo Freire said " It's necessary to plant the seed of education to reap the fruits of citizenship." (Júlia Leonardo Souza )

June 13, 2018 at 6:26 PM

For the future, I need an education that is universal. The education is the best way to change the world. If we have good schools, we will have good people. It is necessary to introduce the technology, especially in Brazil, and use this to make classes more attractive and interactive. It is important to remember that parents and families have to work next to the teachers, because the family is the first school that we have in our lives. The Family have to teach values like respect and equality to prepare the children for the school, for the life. (Ana Cecília Casada )

June 13, 2018 at 10:42 PM

The education I want for the future, is education for all. This is not only about school education, but also the education we receive from those who create us. For example, the government could do projects for the literacy of street children, or even citizens could speak for it. Perhaps it is not the social class that discriminates, but again, the lack of education. (Vivian Karen Costa Carvalho)

June 14, 2018 at 6:59 AM

I want an education that can include various types of evaluation according to the type of student, and education that is not racist or sexist, that there is no difference between public or private schools, that everyone is at the same level

of learning, and that everyone has access to quality education. (Genivânia Souza Santos )

June 14, 2018 at 11:35 AM

I would like an education where there is a valorization of cultural and artistic knowledge, with projects and workshops that bring the student of knowledge closer, whether in relation to dance, music, theater, national or international culture. An education that opens the doors of knowledge that is deep and valued. Our government has to do something to change more, and for the best, because our children's, teenagers and old ones need to have an education that gave knowledgeable of quality, and not just pass the matter and decorate it, but learn how to learn more and more. In addition, student that knows how to appreciate this kind of education that I want for the future that I believe that one day will happen. (Júlia de Faria)

June 14, 2018 at 2:22 PM

The education I want for the future is an education where students are not so pressured to take a college entrance exam and enter a college anyway, but they can feel free to do whatever they want and when they want. Those students can debate more about important issues like politics, social movements and express opinions.

Let technology become an aid tool for students and teachers during classes and research that need more fundamentals. The classes could be more dynamic and not stay in this thing of students sitting bored and listening to what the teacher says, but that has some dynamics of interaction between student and teacher or student and student, I see that in my school many students are not so interested in classes for being the same every morning for six hours in a row, then having a momentum or a way out of the classroom environment can make students more interested in classes and learn in a healthy and natural way.

I think the education we have in Brazil nowadays is good in some places and precarious in others but not great when compared to some countries that cherish the wellbeing of their students and staff and I think a school with a good infrastructure can make students feel good and interested in studying. (Kamilla Borges )

[June 14, 2018 at 3:39 PM](#)

The education I want for the future is where everyone has the same opportunities and there are more practical classes for better understanding, where contents that interest the student are approached and that can choose what they want to do or study to dedicate more to one thing only, education where there is respect and everyone shares general knowledge without prejudice to each other. Teachers who are qualified and dedicated to the student and to their learning (Lara Nobre-)

June 14, 2018 at 6:46 PM

The kind of education that I want for the future is the education system must teach the students the ability to learn, not the ability to memorize. For that, a commute assistance with funds for schools, for how to buy materials of a recent year. An application of field studies, learn more in practice. (Victoria Carvalho)

June 14, 2018 at 8:35 PM

The education that I want for the future it's an education with quality, that can possibility to student immersion on the learning process, with alternatives to traditional methods of classroom learning, with learn of politics, education financial, notions of law, enpreendorism and creativity. I wish to, that when the student finish the school, they can feel prepared to world and to professional market. (Fellipe Duarte)

June 14, 2018 at 8:54 PM

The education I want for the future is an education that thinks of the public school student and its potentials. Giving recourses to the school to help in the construction of areas that could development the knowledge. We can learn by many ways, we only need to put them in work. I also want an education that

respect the teachers, because this job is very important and the teachers taught us how to live in society as a good citizen. (Alyssa Lopes )

June 15, 2018 at 6:38 AM

I think education in Brazil has a system that is flawed because it has choices that have a better structure and others do not. Nevertheless, because this difference is simple and the educational system we have, it sends more money to the schools, but the schools in the periphery receive little money. Because of this difference, many choices end up lacking in structure for students and teachers. The educational system to be a flawed system. Also, have the methods used to teach that they are very mechanical, since many times there are no differentiated classes to attract the attention of the student, and need to have more practical classes for a better absorption of the subjects. Summarizing the education system needs to be restructured to better meet the needs of all schools and provide better learning. (Emivalto da Costa)

June 15, 2018 at 6:43 AM

I want an education system that is equal to everyone, that gives support to the students not only in classes, that means that the schools should have at least a sport, music and languages program. Education in Brazil should help the students to develop other abilities that they will use in life. We should focus

less on the grades and help the intellectual, emotional, moral and physical of the students too. (Ana Catharina Goldenberg)

June 15, 2018 at 8:00 AM

The education I want is an education that arouse kind's minds, taking what is best in side of each one of them, without forgetting that school is a place for building citizens and not money. I say this, because analyzing the students in school period, we see high indices of psychological disorders, such as, anxiety and depression, and this is a result of the extremely competitive system we are exposed in all educational time. This reality must change, I believe in an education program that uses the tools we have like technology for taking the knowledge outside the schools. In addition, that education I want must be free, for everybody and with quality. (Isabella )

June 15, 2018 at 8:46 AM

The kind of education I want for the future is an education where I can open my eyes and saw a new future for all the students. Where I can know many new things every day. A good education for me is the base of the world because if all people have the better education they can change the location where they live, and it's very good, if it turn to be a reality our political system would be more efficient and have more agility for make good things for the

Brazilians, the technology could be more advanced and the students can use this for create a new world. Therefore, I want the education for the future and I want it is be real. (Victor Hugo)

June 15, 2018 at 12:30 PM

Nowadays it can be clearly seen how hard a student's life can become as the years pass. People want a normal teenager to learn 13 subjects, but not all students are good at math. Not all are good at literature. Not all are good in everything. In fact, most of us has difficult in at least one area of knowledge. I agree that we should be taught most of the subjects until a certain age, basic information about everything is important for us not to become total fools. However, I think that the students should be allowed to choose their subjects at some point. Thinking in a logical way, for example, you cannot just expect that a person who is great for humanities go well in physics too. It can happen, but it is not so common. Why force someone to take classes and do exams of a subject that she doesn't like or goes well, taking risks of prejudicing this person's self-esteem, causing the potencialization of frustration, and maybe taking down these person's chances of getting into a university or a job that she wants and has nothing to do with half of the things that she studies? Schools should be stimulating us to be creative, to solve real issues. Schools should be places where we learn as much as we can and are challenged every day to be the best professionals that we can in the areas that we want to! If someone wants to learn every single subject available, that is a great thing, but if someone wants to study only humanities, it is ok too. This person should

not be ashamed of not being awesome in all of this. To summarize the education that I want for the future: nobody should feel pressed to be good in everything (Maria Eduarda Angeli)

June 15, 2018 at 3:41 PM

The education that I want for the future is that students, especially those of middle school have not only mathematics, Portuguese, English, physical education among others in their crates slots as in the days of today, but they have different issues to be board in the classroom such as, for example, education policy, financial education and the different materials which are little discussed, but which are extremely necessary for the student to become a good citizen in the future. I think that the student who is in his middle school about to become a university and also a citizen, he needs to have your critical sense in relation to everything and everyone, I think that the student has to have a very broad vision about any type of matter, and there is no better place than the school to teach and pass this for student. I think that education is never too much for anyone in fact the better knowledge; we need a society where citizens have rather a broad, diverse education. (Gabriela Costa Faria)

June 15, 2018 at 7:27 PM

I think we need many things for a better education. One of my ideas is the psychological help, because nowadays young people are so depressed and

anxious, usually they want too much and fast, they want a career, a house, a lover, and the society also impose that idea. We know psychological diseases are spreading at all kind of people and help is necessary. I also think at the school the teachers need to be more didactical because sometimes we have a lot of texts and boring classes and usually the youngers have so much energy, so do something different is a good idea. I think we need more CILs, so we could expand vacancies to the community, to the adults. We need more universities. In addition, I think it is important to do vocational tests to help the youngers to decide their occupations. (Brieny Stefany )

June 15, 2018 at 7:33 PM

Education is one of the most important sectors of the society. The investment in it is essential and indispensable for the development of the whole nation. A good quality Education provides a well-developed country. I want for the future a valued Education. The state has to look at it and say they need to invest in it, spend money on it. Valorize teacher's salary, invest in scientific researches and improve the infrastructure of the schools and universities. However, it is not worth in a great Education if not everyone has access to it. The Education I want for the future does not only have investment, but it need to be inclusive. Education is a human right, everyone need to have opportunity to be part of it. The pours, the handicapped, everybody! The public schools should not be worse than the private ones so the less financially privileged people would not be having a worse education. It is also hard to the handicapped people. The schools need to have specialized people to assistance

the handicapped, and they need better-adapted material. The Education I want for the future is one that carries about the less privileged people's needs and give the same opportunity for everyone. Education in schools also have to be more participative. The students in schools are too much passive in the classrooms. It is as the teacher possesses the knowledge and give it to the students who do not know anything. They do not have to think, just receive information. Education was not supposed to be like that! Nobody can learn just being a passive receiver of information; we have to discuss, to work, to experience, to think. The teachers should be more like a mediator, someone to let the discussion flow, someone to lead the students to think. These are some points I think a good quality Education should have. That is the kind of Education I want for the future! (Vinicius Carvalho Lima Alcanfôr)

[June 15, 2018 at 7:34 PM](#)

The type of education that I want is an education more free for students and teachers arrive anytime and can use more electronics to study, can use smartphone or mp3 for listen to music ,can sleep anytime. Teachers and students do not need justification to be absent, the salary of teachers is same football players and the government give more money for education because country is not built on violence country is built with education. Alan Demétrio

June 15, 2018 at 7:45 PM

I hope in the school we talk about issue of the world. I guess that High school's students are very no knowledge about the world, so I was thinking if we had one class that the teacher would talk about the general knowledge. Moreover, I think important if had some subject like administration, or to scheduling because our technology evolved a lot. I guess that School could improve or update the way us teach, because the method is very old. We also are not living on the same world compared to before. ( Davi Pena Esteves Torres )

June 17, 2018 at 9:49 AM

The Brazilian education on going through a hard time, because they cannot develop a good quality education for the Future of the nation. With the globalization and a difficult access, the education keeps getting worse to deal with the events. The education starts at school, where there is lack of infrastructure to have a good education system so that we can get further and have a good condition. In my opinion, there should be subjects in school that spoke more about the reality, the case of exceeded teaching, and maybe the access to internet at schools would be a good way to understand and associate things better. Another point would be to prepare for the job market, where they would go back to that subject and show the youth about how it works inside a company, or the reality of what it is like working nowadays. ( Ana LÍdia)

June 17, 2018 at 2:28 PM

The education that I want to the future is a public education that the government provides this and invest in it. An education that encourage the students to learn and be a good citizen. For this, the school needs serve the whole society and needs to be include, where everybody can study together and do not have to pay for this, where everybody can have the same opportunity. An education that does not makes the students crazy or makes them a machine. We are humans and we need to learn about the school subjects, but for the first place, we need to learn about life and how it lives in a healthy and peaceful way, to find who or what we want to be in our future. (Beatriz Prado )

June 17, 2018 at 2:55 PM

The education I want for Brazilian future is one that offers information, accessibility and which supports the learners. A diversified education with practical classes and good and qualified professionals. With government investments and the students' motivation, we will have a bright future for Brazil. (João Pedro)

June 17, 2018 at 2:58 PM

The education that I want for the future and for the Brazil is an education with quality and public schools, which have good teachers, and they will be valued. Schools with nutritionists and a healthy menu. Schools with free education and equal opportunities where the businessperson's son studies with the garbage man's son, creating social inclusion and all the schools be great schools, whatever the school in the center or the nearest street. It is also necessary to reduce the workload and the number of tests, because quantity is not quality and we have to prioritize the reasoning and creativity of our children, because they are the future and the school should be a place where children feel pleasure to go and not an obligation. (Letícia Cassemiro)

June 18, 2018 at 5:20 AM

I think we need more governmental support in education, something very difficult to implement, because we see clearly that certain localities and social classes receive more resources than others, which in a way discourages both sides, teachers and students, we see how the money is lost by corruption, causing the schools themselves to seek support from families to meet basic needs, families that often cannot collaborate. Despite these and other causes, we also see the population's lack of interest in the study, considering that the labor market is increasingly scarce for those who already have great certifications and preparation. I hope that in the future people will be more

interested in acquiring knowledge and making a difference in education, because it depends on the interest and pursuit of each one, that with the advancement of technology people use this tool to grow academically. I hope we know how to recognize our teachers and value them for their great role, since it is not recognized with the least of respect. (Thais Nardy)

June 18, 2018 at 6:25 AM

The education I want for the future is an education based on respect, where everyone can express their opinions in the classroom, independent of the hierarchy built between teachers and students. Let the students feel at home and enjoy being in the school environment, learning to work together in search of a better future for their country. Where love for knowledge prevails. (Ana Beatriz Queiroz )

June 18, 2018 at 3:49 PM

The education that I want to The Future is an education with more equality, which more people have a chance to being in a School and university, and have more women and Black people in the science. An education, which encourage people to study what they love, not what gives money? An education without prejudice and that cares about student's mental health. (Ysabella Nascimento )

June 18, 2018 at 6:05 PM

The education that I want to the future is an education with more quality, where the students are organized in a wheel or groups facilitating the debates of the matter and allowing everyone to see each other, that brings the students to reality and the teachers must continue teaching, but the schools they need to be more open and democratic spaces that give security to the student to share their opinions and contribute in a nutritious way to the learning process that is happening. (Thaissa Dantas )

[June 19, 2018 at 5:38 AM](#)

Palloma Ferreira 3C - the kind of education that I want for the future is that students study can became a good and interesting thing for to do. That as has dynamics methods of learning, including all the types of science and talents mainly the part of art and to make improvements in education system in Brazil (Palloma Ferreira)

[June 19, 2018 at 6:49 AM](#)

For the future, I want an education that makes the students asks about everything around us and with these questions find answers that can explain or at least try to explain the things. This process when the person can discover why the things are as they seem is very important for have a knowledge improve, with this they can think by their self and not just copy somebody thoughts. This is the kind of education I want. (Stephanie Thomas)

June 19, 2018 at 7:59 AM

What kind of education I want for the future? Education is one of the most important things; it can change a nation, create new opportunities, and improve technologies and the society in general. The educational system has to work in a healthy way, do not using the students just as grades for rankings and do not incentive the competition between them. The starting point should be the adoption of a more humanized education within the educational institutions. Having as a goal the student's development while a conscious citizen and their mental health – which is what really matters in this whole process – will open the doors towards the good performance idealized by the society. Many people talk about school dropout but few act to mine it. Seeking to take care of their difficulties instead of trivializing them is not only an empathy basis act but also a duty that, unfortunately, is left aside. Such actions that make up this sad reality discourage students in an unprecedented way, and this is why respect must be put into practice, not only by students but also by professionals. If we don't take care of our students they will get sick – emotionally and physically – being one of them is not an easy thing, they are pressured to be what the society aspire to them, not what they want. The education I want for the future is an educational system that respect students and they choices. (Maria Natália)

June 19, 2018 at 8:40 AM

The education that I want for the future is a humanitarian education. Where the students are treated not just like one more in a thousand, but where they are treated like the singular human being as they are. I know this is hard, but is something that must to be improved. It is so much better when people feels like they are someone, not just another one, in consequence of this feeling of being part of something, the results will be much more positive, and then, people will stop thinking about school so negatively. (Lara Teacher Claudia)

June 20, 2018 at 1:53 PM

The education that I want for the future is an education that has voice that is powerful and includes everyone in everywhere. Our teachers should bring us classes that are more dynamic so then we'll get more interested on learning, like showing us how we'll use that in our lives. In addition, we have to respect our masters because everything starts with respect. (Nicole )

June 21, 2018 at 10:59 AM

To a better education, we need to invest more in the schools. The schools should provide others activities for students if they want to do like music or theater. Teachers need to learn how to use internet and others technology is for the classes and would have a better relationship with students. The schools needs to be prepared to take care of students who suffer some accident instead just give ice for them. Students need to learn how choose a carrier for life that they want and like to do and not just because the money. We need an annual education because the students will absorb more of the class if they have more

time. The private schools needs to ends how can we talk about social equality in the schools if we have this. Finally we need to stop with multiple choices exams because many times they give the answer to us, we are students we need to know the answer if the exam give the answer how can I learn?(Lucas Gabriel)
